Pin 30 & 87: High
Power Terminals

Wire Specifications

The colors of wires stand for the wires of different relays (Available relay wires includes: White Yellow and Blue).

Please pay attention to the thickness of wires: Thin wires need to be connected to switches, and the thick wires need to be connected to the devices.

As for the rest wires: Red wires are the positive pole of fuses, need to be connected to the battery+. Black wire is the other side of relay coils, needs to be connected to battery-.
